

PREMIUM EYEWEAR FOR WATERSPORTS

The Surge adopts the same design philosophy brought to life in the Typhoon - bringing to the market high quality watersports and mountain sports eyewear that is both functional and stylish with an affordable price tag.

The Surge retails between €90 and €143 with price determined by lens functionality and coatings. It is everything that adventure eyewear needs to be, to really perform in everyday to extreme conditions.

The Surge benefits from the same FAILSAFE leash system incorporated in the Typhoon, guaranteeing against accidental loss. As with the Typhoon, the frame is constructed of super-strong and indestructible lightweight Swiss TR90 thermoplastic nylon with 'shape memory' that absorbs impacts and bounces back into its original shape. It also incorporates injection molded rubber in the nose / bridge area and on the temples for added comfort.

Recently revitalised with an array of new high quality polycarbonate lens options, the Surge is offered with a wide selection of lens functionality including 5 mirror coatings, ORION anti-fog coating - with or without polarization.

Oleophobic & Hydrophobic

Anti-glare

Scratch resistant

100% UVA & B protection

SURGE - KEY FEATURES

- VIVIDE LENSES:** Decentered injected polarized high contrast polycarbonate lenses with oleophobic and hydrophobic lens coatings on both inside and outside lens surfaces. Available in Polarized (VIVIDE Ice Blue) and non-polarized (VIVIDE Copper-Grey Silver Mirror).
- LEVANTE LENSES:** Decentered injected polarized polycarbonate lenses with multiple mirror coating options and ORION anti-fog coating. Incorporates hydrophobic and oleophobic coatings on both sides to repel water and dirt. Also available with ORION anti-fog coating.
- FRAMES:** The frames are made of TR90, a super-lightweight and flexible Swiss polymer that offers shape memory and is highly impact resistant. This is combined with shock absorbing injection molded rubber on the inside of the frame and on the temples for long-lasting comfort.
- ANTI-FOG:** A clever, patented venting system in the frame obstructs air from blowing directly into your eyes but rather vortexes it up and down via the cutting in the lenses to counteract fogged lenses.
- LEASH:** 100% failsafe clip-on strap system with a non-elastic, anti-slip cord which comfortably and securely straps the frames to your head, backed up with a soft silicone retainer necklace to which the leash attaches. The system guarantees against loss, even during the harshest of wipeouts.

Injection moulded TPU rubber fused to the inside surface of the frame and on the temple tips provides a comfortable interface and a cushion effect on impacts.

The GRIPLOC™ cord toggle cinches a non-stretch and unbreakable nylon leash cord into position at the back of the head by sliding the central black section of the toggle towards the head. Ridged notches inside the toggle lock the leash cord into position and guarantee a secure and slip-free performance. The GRIPLOC™ is easily released with one hand by pulling down on the grey outer sections with finger and thumb to release.

The nylon leash cord is attached to the left and right temple connectors. On the inner surface, the temple connector is gently curved in the shape of the head to ensure a comfortable and smooth fit. On the outer surface, there is a recessed socket into which the rubber temple of the Typhoon slots into position.

The FAILSAFE leash hook that connects to the silicone necklace is located at the opposite end of the nylon leash cord. The leash cord is permanently threaded through the body of the leash hook and cannot be removed. The profile of the hook is curved to accommodate the asymmetric profile of the silicone necklace. To install the necklace into the leash hook, the necklace is stretched and the thicker (inner) surface is inserted into the hook profile.
